

Organization with a real all-rounder

GroupJoyner is the first multiuser organizer which allows users to simply organize, plan and implement groups, joint activities and events from a single application. The app is available for Android, iOS and as a web application.

GroupJoyner

One app for everything. Everything in one app.

From B2C to B2B

Not all GroupJoyner users are private individuals. Nowadays, for example, crafts businesses use the multifunctional organizer developed by the Düsseldorf start-up to organize their order processing. Amateur soccer teams use it to manage entire seasons and tournaments, and numerous political associations at local, district, county and state level use it to administer their organizational processes.

Everything in a single app – and on the web

GroupJoyner is the most powerful and the most popular multiuser organizer currently on the market. With the help of this all-round talent, users can create and manage groups, plan events, organize dates and To-Dos, conduct polls and send text messages, pictures and videos in both group and individual chats.

All this in real time, with maximum clarity, intuitive usability and maximum data protection.

The harmonious interaction between app and web application is where the organizer really unfolds its full potential. You can use your GroupJoyner account simultaneously on the smartphone or tablet app and via the web application in any browser. Free of charge.

Events, participants, places & times

Whether it's a study group, conference or team trip, customer visit, wedding celebration, order processing or your next working group: with this app, you always have an overview of all your upcoming events – in both your professional and private life.

To-Dos

Who's bringing what? Who's going to set up the stand? Who will hand out the fliers? Create easy-to-understand To-Dos, assign tasks and deadlines, and check what's already been done.

Polls

Vote on things like ideas, locations or dates. Thanks to the practical survey and voting tool, you can also answer anonymously!

Posts

Send messages, post pictures and share videos to your group members and event attendees.

This is how it works:

1. Download the free GroupJoyner app from the App Store or Google Play, or visit www.groupjoyner.de.
2. Create an account (with a professional or private profile) or log in with your Facebook or Twitter account.
3. Join a group with a Joyn code, find nearby groups via the "Discover" function or create your own private or public group using +.
4. Invite your family, friends, club mates or colleagues to join your group by email, QR code or link. Or simply send them a Group Joyn code.

Tips:

- In the "Overview" menu you can see everything that's happening in all your groups and events. A single click takes you directly to the item.
- Save yourself a lot of time and start a poll when you create an event and directly assign a To-Do.
- Find just the right groups for you – in the "Discover" menu everything is optimally sorted.
